**HEADLINE: Sagebrush Technology Growing Fast**

Sagebrush Technology, Inc., manufacturer of precision positioning systems, is the proud recipient of the New Mexico Technology Flying Forty award for 2005. The award recognizes the forty fastest-growing technology companies headquartered in New Mexico. 2005 is the fifth straight year that Sagebrush has garnered the award for top revenue growth companies with revenues between \$1 million and \$10 million.

The Flying Forty awards are sponsored by the Albuquerque Journal Business Outlook section, KPMG LLP, New Mexico Bank and Trust and Technology Ventures Corporation.

Sagebrush Technology designs and manufactures computer controlled, precision motion control devices called positioners or "gimbals," that enable the effective and efficient utilization of detectors, cameras, lasers, optics, radars, telescopes, antennas and other sensors. Sagebrush products are used in diverse applications around the world in the defense, communications, surveillance, marine navigation and medical equipment industries.
